

Card Sort Activity

Instructions

1. Identify 4-6 primary components of the intervention. Label a card with each identified component. These cards are the “header” cards.
2. Under each header create 4-6 cards which can include descriptions, examples, quotes or definitions. Each description or example is on a separate card. (Using different colored cards can make it more visually interesting.)
3. Give each team a deck of shuffled cards. Instruct them to first sort out the header cards. Next ask them to put the descriptors/examples, etc under the appropriate headings.
4. Create an answer sheet which includes all the headings with the correct descriptors below. Distribute once all teams have completed the task and ask teams to count how many they got correct.
5. Debrief with the group about cards that could have fit in more than one category.

**Template for making the cards is on this CD.
